Lecture 03 Complex Variable, Laplace & Ztransformation

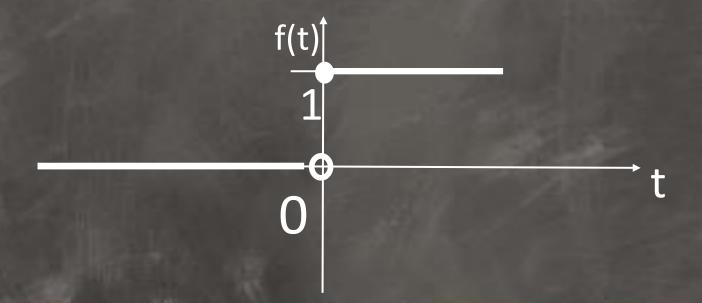

This Lecture Covers -

- 1. Definition of Unit Step Function.
- 2. Rectangular Pulse.
- 4. Laplace Transformation of Unit Step Function.
- 5. Examples & Exercises on Laplace Transformation of Unit Step Function.

Definition of Unit Step Function

The Unit Step or Heaviside's function is defined as follows:

$$f(t) = u(t) = \begin{cases} 0; & t < 0 \\ 1; & t \ge 0 \end{cases}$$

Shifted Unit Step Function

The Unit Step or Heaviside's function is defined as follows:

$$u_{a}(t) = u(t - a) = \begin{cases} 0; & t < a \\ 1; & t \ge a \end{cases}$$

$$1$$

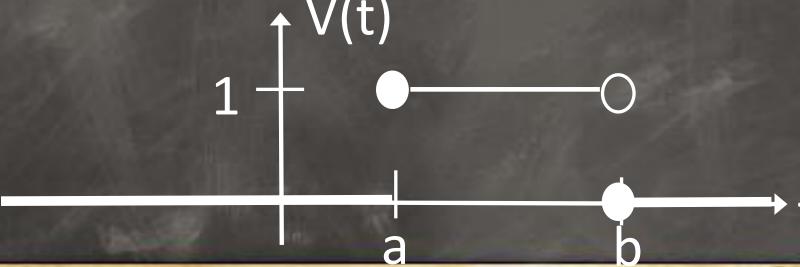

$$a$$

Rectangular Pulse

A common situation in a circuit is for a voltage v(t), to be applied at a particular time (say t=a) and removed later at t=b (say). We write such a situation using unit step function as:

$$v(t) = u(t - a) - u(t - b) = \begin{cases} 1; a \le t < b \\ 0; \text{ otherwise} \end{cases}$$

$$\uparrow V(t)$$

Laplace Transformation of Unit Step Function and Examples

Formulae:

$$\mathcal{L}\lbrace u(t-a)\rbrace = \frac{e^{-as}}{s}$$

$$\mathcal{L}\lbrace f(t) u(t-a)\rbrace = e^{-as} \mathcal{L}\lbrace f(t+a)\rbrace$$

Example 1:

$$\mathcal{L}\{t^{2} u(t-3)\}\$$

$$= e^{-3s} \mathcal{L}\{f(t+3)\}\$$

$$= e^{-3s} \mathcal{L}\{(t+3)^{2}\}\$$

$$= e^{-3s} \mathcal{L}\{t^{2} + 6t + 9\}\$$

$$= e^{-3s} \left[\mathcal{L}\{t^{2}\} + 6\mathcal{L}\{t\} + \mathcal{L}\{9\}\right]\$$

$$= e^{-3s} \left[\frac{2!}{s^{3}} + 6\frac{1}{s^{2}} + 9\frac{1}{s}\right].$$

Ans.

Laplace Transformation of Unit Step Function and Examples

Example 1:

$$\mathcal{L}\{\sin t \ u(t)\}\$$

$$= e^{0 \times s} \mathcal{L}\{f(t)\}\$$

$$= \mathcal{L}\{\sin t\}\$$

$$= \frac{1}{s^2 + 1}$$

Ans.

Example 2:

$$\mathcal{L}\{e^{-2t} u_{\pi}(t)\}\$$

$$= \mathcal{L}\{e^{-2t} u(t - \pi)\}\$$

$$= e^{-\pi s} \mathcal{L}\{f(t + \pi)\}\$$

$$= e^{-\pi s} \mathcal{L}\{e^{-2(t + \pi)}\}\$$

$$= e^{-\pi s} \left[\mathcal{L}\{e^{-2t} e^{-2\pi}\}\right]\$$

$$= e^{-\pi s} e^{-2\pi} \mathcal{L}\{e^{-2t}\}\$$

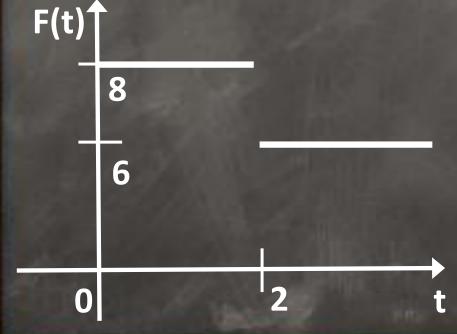

$$= e^{-\pi (s+2)} \frac{1}{s+2}.$$

Ans.

Laplace Transformation of Unit Step Function and Examples

Example 3. Given $f(t) = \begin{cases} 8; 0 < t < 2 \\ 6; t > 2 \end{cases}$, Sketch the function f(t), also express f(t) in terms of

Unit step function and hence find it's Laplace transformation.

$$f(t) = 8[u(t) - u(t-2)] + 6u(t-2)$$

$$= 8u(t) - 8u(t-2) + 6u(t-2)$$

$$= 8u(t) - 2u(t-2)$$

$$F(s) = 8\mathcal{L}\{u(t)\} - 2\mathcal{L}\{u(t-2)\}$$

$$= 8\frac{e^{0\times s}}{s} - 2\frac{e^{-2s}}{s}$$

$$= 8\frac{1}{s} - 2\frac{e^{-2s}}{s}.$$

Exercise Set on Laplace Transformation of Unit Step function

Sketch the following function and find their Laplace Transformations:

1.
$$f(t) = t u(t-1)$$
,

$$2. f(t) = (t-1) u(t-3),$$

3.
$$f(t) = (t+2)^2 u(t-1)$$
,

4.
$$f(t) = e^{-2t} u(t-3)$$
,

5.
$$f(t) = 4 \cos t \ u(t - \pi)$$
.

Sketch the following function, also express f(t) in terms of unit step function and find it's Laplace Transformation:

6.
$$f(t) = \begin{cases} t; 0 < t < 1 \\ 2; t > 1 \end{cases}$$

7.
$$f(t) = \begin{cases} t^2; & 0 \le t < 1 \\ t - 3; t \ge 1 \end{cases}$$

Learning Outcomes:

In engineering applications, we frequently encounter functions whose values change abruptly at specified values of time t. One common example is when a voltage is switched on or off in an electrical circuit at a specified value of time t. The switching process can be described mathematically by the function called the **Unit Step Function**.

In this lecture we overviewed the general concept of unit step function and also discussed the process of Laplace Transformation of unit step function.

Sample MCQ

1. If
$$f(t) = \begin{cases} 1 - t & \text{; } 0 < t < 1 \\ 0 & \text{; } t > 1 \end{cases}$$
 then what is $F(s)$?

(a) $\frac{2s + e^{-s} - 1}{s^2}$ (b) $\frac{s + e^{-s} - 1}{s^2}$ (c) $\frac{s - e^{-s} - 1}{s^2}$ (d) $\frac{s^2 + e^{-s} - 1}{s^2}$

(a)
$$\frac{2s+e^{-s}-1}{s^2}$$

(b)
$$\frac{s + e^{-s} - 1}{s^2}$$

$$(c)\frac{s-e^{-s}-1}{s^2}$$

(d)
$$\frac{s^2 + e^{-s} - 1}{s^2}$$

2. If
$$V(t) = \begin{cases} 0, & t < 3 \\ 2t + 8, & 3 < t < 5 \\ 0, & t > 5 \end{cases}$$
 then which of the following is

corresponding unit step function?

(a)
$$(2t+8) \cdot [u(t-3) - u(t-5)]$$
 (b) $[u(t-3) - u(t-5)]$

(b)
$$[u(t-3)-u(t-5)]$$

(c)
$$[u(t+3) - u(t-5)]$$

(d)
$$[u(t+3) - u(t+5)]$$

$$3 \cdot \mathcal{L}\{t^2 u(t-3)\} = ?$$

(a)
$$e^{-3s} \left[\frac{2}{s^3} + \frac{1}{s^2} + 9\frac{1}{s} \right]$$
 (b) $e^{-3s} \left[\frac{2}{s^3} + 6\frac{1}{s^2} + 9\frac{1}{s} \right]$ (c) $e^{-3s} \left[\frac{2}{s^3} + 6\frac{1}{s^2} + \frac{1}{s} \right]$ (d) $e^{-3s} \left[\frac{1}{s^3} + 6\frac{1}{s^2} + 9\frac{1}{s} \right]$
